1. Go **download the app** by searching ‘SAS mobile BI’

Title should be ‘SAS Visual Analytics’

Available for Android, iOS and Windows 10

2. Click ‘OPEN’

3. This is what the app looks like when fully downloaded

You can either ‘Add Reports’ or go back to the link you were trying to open.

4. Use a browser to try to open the report link on the OIRP website

Now that the SAS Visual Analytics app is on your device, it will engage when you tap on the link.

When you see this prompt, hit ‘Open’
5. You will then be prompted to add the server name to your Connections.

Click ‘Yes’ when prompted.

The next time you return to this report it should already be saved.

If you open a different report that is saved on a different server (for example, an internal report), it will prompt you again to add that server to your list.

6. Agree to view report in Guest Mode

Click ‘Yes’ to view without additional logins.

You can still log in to reports when you want to; Guest Mode will become the default until you change it.

7. Confirm that you want to open report

Click ‘Yes’

This serves as a reminder of the report you’re trying to open.

8. Enjoy SAS Visual Analytics

Just having the viewer on your device will allow you to open links that contain SAS VA reports.

You will not be able to view SAS VA reports on a device that does not have this app.
